Result

Pred. No. is the number of results predicted by chance to have score greater than or equal to the score of the result being part and is derived by analysis of the total score distribution.

      The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or
                                                                                                                                                                                       New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutation responsible for genetic disorders or other traits and to assess biodiversity -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      TFIID and are thought to mediate transcriptional activation. This encouperistic may be produced recombinantly from transformed host cells or purified from human cells. hTAFII105 specific binding agents such as specific antibodies could be used for diagnosis (e.g. genetic hybridisation screens for hTAFII105 transcripts), therapy (e.g. genetherapy to modulate hTAFII105 gene expression) and in the biopharmaceutical industry (e.g. as immunogens, reagents for isolating cell specific activators or other transcriptional regulators).
                                                                                                                                                                                     biodiversity

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This cDNA sequence represents a human tata-binding protein associated factor, hTAFIII05, isolated from Daudi cell nuclear extracts. Tightly associated subunits (TAF's) are components of the transcription factors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 1; Col 17-22; 12pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                Polypeptide encoding TATA box binding protein associated factor II 105 useful for treating e.g. cancers and inducing apoptosis has a dominant negative effect on the normal biological activity of the binding
                                                                                                                                                                            Dikstein
                                                                                                                                                                                                                            27-AUG-1998;
                                                                                                                                                                                                                                                                              09-MAR-2000.
                                                                                                                                                                                                                                                                                                                                                      Misc-difference

                     pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as attached the content of the co
                                                                                                                                                                                                                                                                                                                                                     polypeptides. The proteins and their associated DNA sequences are used the treatment, prevention and diagnosis of medical conditions caused by p. acnes. The disorders include SAPHO syndrome (synovitis, acne,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                enzyme linked immunosorbent assay (ELISA).
Note: The sequence data for this patent did no specification, but was obtained in electronic at ftp.wipo.int/pub/published_pct_sequences.
                  sequence is a polypeptide encoded by a cDNA an expressed sequence tag (EST) found to be foetal tissue cDNA libraries.
                                                The invention relates to novel foetal polypeptides encoded by polynucleotides comprising one of 477 sequences fully defined in the specification. The foetal polypectides and polypeptides are useful in the treatment and diagnosis of diseases such as cancers, immune disorders, growth disorders (e.g. osteoporosis), thrombolytic disorders, nervous system disorders and inflammation. The present
                                                                                                                                                         Novel fetal proteins useful for the treatment and diagno associated with dysfunction of the protein e.g. cancers, disorders, growth disorders, thrombolytic disorders, ner

The invention relates to isolated polynucleotide (I) and CC polypeptide (II) sequences. (I) is useful as hybridisation probes, CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving CC (II). (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as a modern as the control of consideration of sites expressing (II). (I) and (II) are useful for treating CC imaging of sites expressing (II). (I) and (II) are useful for treating CC diagnostics, forensics, gene mapping, identification of mutations in CC diagnostics, forensics, gene mapping, identification of mutations considered the produce other types of data and products dependent on DNA and CC amino acid sequences. ABG00010-ABG30377 represent novel human CC diagnostic amino acid sequences of the invention.

    AAG29892;
                                                                                                                                                                                                                                                                 disease resistance protein in a plant. The polynucleotides encoding the disease resistance proteins are useful for increasing resistance in a plant to disease, controlling cell death, and conferring resistance to herbicides. They are useful as probes or amplification primers in the detection, quantification, or isolation of gene transcripts. They can be used for recombinant expression of their encoded polypeptides, as immunogens in the preparation and/or screening of antibodies, and in sense or antisense suppression of the polynucleotide in a host cell,
                                                                                                                                                                                                                           Sequence
                                                                                                                                                                                                                                                                                                                                                                                     resistance polynucleotide operably linked to a promoter, or by culturing the plant cell under plant growing conditions to produce a regenerated plant, or by inducing expression of the polynucleotide to modulate the
                                                                                                                                                                                                                                                                                                                                                                                                                                and transgenic plants including maize, soybean, sunflower, sorghum, canola, wheat, alfalfa, cotton, rice, barley or millet. The level of disease resistance protein is increased by transforming a plant cell with a recombinant expression cassette which comprises the disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel isolated maize disease resistance polynucleotide useful for increasing resistance in a plant to disease, controlling cell death, and conferring resistance to herbicides -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Maize; plant disease resistance; crop; soybean; sunflower; sorghum; canola; wheat; alfalfa; cotton; rice; barley; millet; plant cell death; herbicide resistance; ZmPtil-1; Ptil; Ptol.

ABN15762 to ABN27252 encode the human ORFX proteins given in ABP00010 to ABP11500. ORFX proteins are useful for treating or preventing a pathology associated with an ORFX associated disorder in humans, and in the manufacture of a medicament for treating syndrome associated with ORFX-associated disorder. ORFX polynucleotide sequences can be used in the treatment of cancer, hyperproliferative disorders, cirrhosis of liver, psoriasis, benign tumours, keloid, degenerative disorders, haemorrhage, osteoarthritis, neurodegenerative disorders, disorders related to organ transplantation, cardiovascular diseases, diabetes mellitus, systemic lupus erythematosus, hypertension, hypothyroidism, cholesterol ester

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to novel genes (AAL34669-AAL37666) and proteins C (ABB03087-ABB04109) associated with the musculoskeletal system useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, c antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and cother cancers of the adrenal gland, bone, bone marrow, breast, c discretise autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; c multiple sclerosis diseases such as viral, bacterial, fungal and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      polypeptide (II) sequences. (I) is useful as hybridisation probes, CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome cc and gene mapping, and in recombinant production of (II). The cc and gene mapping, and in recombinant production of (II). The cc and gene mapping, and in recombinant production of (II). The cc and gene mapping, and in recombinant production of (II). The cc are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques (II) is useful for generating antibodies against it, detecting or committating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating cc imaging of sites expressing (II). (I) and (II) are useful for treating cc disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in classometics, forensics, gene mapping, identification of mutations composition for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and cc amino acid sequences. ABG00010-ABG30377 represent novel human cc diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO cat fits wipe, introubplished pot sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches

CC Parking of disease, multiple sclerosis, amytrophic lateral sclerosis, epilepsy, psychiatric disorders e.g. depression, schizophrenic cdisorders, mania, anxiety or phobic disorders, learning or memory cdisorders e.g. amnesia or age-related memory loss, and neurological disorders e.g. migraine. AZAD molecules are useful as markers of cdisorders e.g. migraine. AZAD molecules are useful as markers of cdisorders or disease states, as markers for precursors of disease state or as markers for precursors of disease state, companies of disease state or as markers of drug activity or cplanucleotide are capable of modulating protein protein interaction, cc e.g. by interacting with an extracellular component, thereby modulating cellular activities, including attachment, adhesion, migration, cc patterning, growth and/or differentiation of a cell. AZAD proteins crequiate embryonic development and differentiation, tissue maintenance and function, pathological conditions, e.g. neuronal degeneration, cc neoplastic transformation and tumour progression. AZAD proteins are useful to screen for drugs or compounds which modulate its activity. AZAD proteins are useful as immunogens to raise anti-AZAD antibodies which are useful to screen for drugs or compounds which modulate AZAD substrates and useful as primers or hybridisation compounds which modulate AZAD activity. AZAD capable of the AZAD protein are useful in gene therapy. AZAD sequences are also cuseful to map their respective genes on a chromosome, for tissue typing and in forensic identification of a biological sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        human AZAD protein which is a multiple leucine-rich repeat-containing secreted protein. AZAD polypeptide is useful for identifying a compound which modulates its activity and binds to it. AZAD proteins and nucleic acid molecules are useful for treating and diagnosing AZAD-mediated or related disorders, which includes a neural
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     disorder (e.g. neurodegenerative disorders, including CNS disorders) and a prostate disorder, e.g. prostatitis, benign prostatic hyperplasia and cancer (e.g. adenocarcinoma, prostate cancer, genitourinary system carcinomas and testicular tumour). The neurodegenerative disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New leucine-rich repeat-containing protein and nucleic acid molecules for diagnosing, treating neural disorders, such as neurodegenerative disorders, such as Alzheimer's disease, dementia, epilepsy and prosta
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              07-DEC-2000; 2000WO-US33140
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is a leucine-rich repeat of human AZAD protein which is a multiple leucine-rich
